Forwarded detailed comments a few minutes ago. Here's an update from last week.

Cook Inlet Tribes' Fish Consumption Assessment

Teleconference with Seldovia, UW Statistician, and WADOE

R10, UW Statistician Dr. Nayak Pollissar, and WA DOE's Dr. Craig McCormack held a teleconference with Seldovia staff April 2. All recommended that the draft report and statistical analyses be revised to characterize and integrate shellfish consumption with finfish and to determine percentiles of consumption rates. Brock Tabor from ADEC's Water Quality Standards Unit contacted Seldovia March 26 requesting the same analyses/numbers. Seldovia staff are working on methodology and will follow-up with the group.

Subject: EPA's comments on Cook Inlet fish study?

Hi Katherine,

During our conversation a couple of weeks ago about the Seldovia fish study, I believe you indicated that Lon Kissinger has reviewed and commented on the draft report? I would really appreciate a copy of the comments if you have them. I could also contact Lon directly, but wanted to check with you first.

Thanks,
Hanh
